Re: Response To Office Action of December 15, 2005  
Re: Patent Application Number 10/709,878

Dear Mr. Pretlow:

Thank you for your office action document of December 15, 2005 (mailing date) regarding my patent application for the *Optimal Surface Mitigated Multiple Targeting System (OSMMTS)* with filing date June 2, 2004, Application Number 10/709,878. The information in this letter addresses the points you made in your office action one by one to demonstrate conclusively why the OSMMTS patent application should be approved immediately.

In the following points, I will extensively refer to the enclosed document entitled *The Optimal Surface Mitigated Multiple Targeting System Patent Application Technical Documentation* (55 pages), hereafter referred to as "the technical document." This document was indeed submitted with the original patent application; however, since that submission was made electronically, through the ePAVE system, and considering its length, it is possible the 55 images did not make it through to you when you originally evaluated the application. I have enclosed a copy of the same document, in exactly the same form as it was originally submitted, to help clarify the points I make below.
